Meeting 07-18

Create empty vertex
Put them in an array
Then insert

Usr might insert 1000, 100, then 3 then 3
use a timeout maybe
work on slightly intelligent algorithm

sqlbatchgraph
hav a method addVertex
create a 1000 vertices then make big query

need the ID and save it to array
when users says shutdown
then put all in the db

implement any algorithm with small number 2 or 3 or 5

get batch working

rather than using 3cpo what is the alternative

Read what it is it for
work backwards
